Priority point tracker

My program will allows users to enter what activities they are attending throughout their semester at Marist College. After attending an event they will log it in the system. The system will tell you how many events you have to attend in order to get priority points for the section (intramurals,community service, and clubs). In the priority point system you are only allowed a certain amount of points for each section; for example for a person is only allowed 3 points for the club section. The program will also notify users how many priority points they will receive from their GPA. To achieve this I will use if else statements. I found keeping track of my activities during first semester difficult and aim to make it easier for Marist students. If I have time I would like to make this into a website or an app so it is easily accessible for all.
